

EMPOWER SUBJECT MATTER EXPERTS WITH STREAMLINED SIMULATION CAPABILITIES

TEDS' SimCorder™, is an advanced application that brings comprehensive simulation design and creation capabilities to Talent Management. Designed for seamless integration with TEDS Learning Composer™, SimCorder is comprised of two elements: a recording tool and an authoring tool. This configuration allows your enterprise's subject matter experts to record a navigation path and then send it to courseware editors and authors for easy editing and revision.

The many features of TEDS SimCorder give users the power and flexibility to:

- record DOS & Windows applications
- add instructions, notes and hints to each screen
- insert media content such as images and audio
- replicate click zones and data entry fields
- perform dynamic cropping of screen size
- publish to multiple applications
- play simulations in three different modes: Show Me, Try Me and Test Me
- insert the completed simulation into TEDS Learning Composer for interactive practice and test activities

On the technical side, TEDS SimCorder

- supports compression for low bandwidth
- supports alternative paths (keyboard/mouse)
- is SCORM 1.2 conformant, so that its Sharable Content Objects can stand on their own or be part of a web-based course.

Deploying SimCorder as a supporting module for the robust TEDS Learning Management System helps maximize performance support and just-in-time learning throughout your enterprise.

Combining TEDS SimCorder with TEDS Learning Composer™ provides a powerful one-two punch for your organization's learning content development initiatives
